# 300/500mA Low Dropout Linear Voltage Regulator

#### **General Description**

The RT9161/A is a 300/500mA fixed output voltage low dropout linear regulator. Typical ground current is approximately 110µA, from zero to maximum loading conditions. Wide range of available output voltage fits most of applications. Built-in output current-limiting most thermal-limiting provide maximal protection against any fault conditions.

For ease of application, the RT9161/A comes in the popular 3-pin SOT-23(300mA), SOT-89 (300mA), SOT-223 (500mA), or TO-92 packages.

#### **Ordering Information**

# **Marking Information**

For marking information, contact our sales representative directly or through a RichTek distributor located in your area, otherwise visit our website for detail.

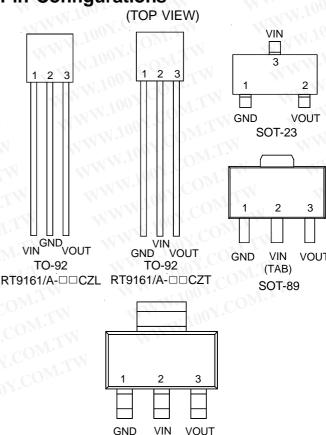

#### **Features**

- Low Dropout Voltage of 200mV at Output Current 100mA, 450mV at Output Current 300mA, and 750mV at 500mA Output Current
- Guaranteed 300/500mA Output Current
- Internal 1.5Ω P-MOSFET Draws No Base Current
- Low Ground Current 110μA
- 2% Accuracy Output Voltage
- Input Voltage Range up to 12V
- Extremely Tight Load Regulation
- Fast Transient Response
- Current-limiting and Thermal-limiting

#### **Applications**

- Voltage Regulator for LAN Card, CD-ROM, and DVD
- Wireless Communication Systems
- Battery Powered Systems

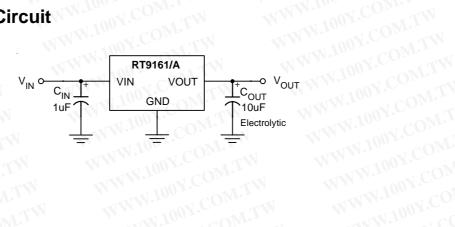

#### **Pin Configurations**

(TAB) SOT-223

## **Typical Application Circuit**

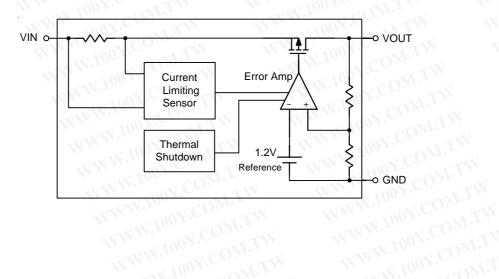

#### **Functional Pin Description**

Pin Name	Pin Function
VOUT	Output Voltage
GND	Ground
VIN	Power Input

Current Limit (2)	RT9161	10.10	V FV V OV	350	580		m A
Current Limit (2)	RT9161A	LIMIT	$V_{IN}$ = 5V, $V_{OUT}$ = 0V	500	900		mA
Dropout Voltage (	3) (4)	V <sub>DROP</sub>	I <sub>L</sub> = 300/500mA	W-101	450/750	600/1000	mV
Standby Current		ISTANDBY	I <sub>L</sub> = 0, V <sub>IN</sub> = 12V	WW.1	110	180	μΑ

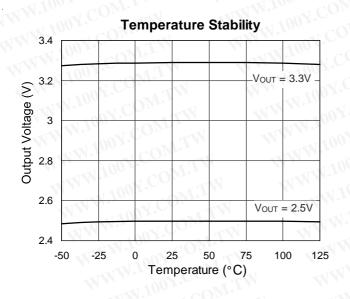

#### Note:

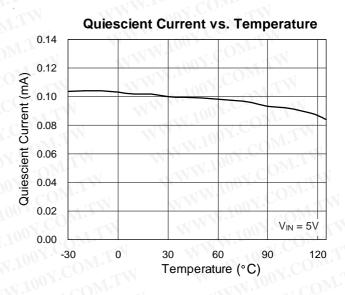

- (1) Regulation is measured at constant junction temperature, using pulsed ON time.
- (2) Current Limit is measured at constant junction temperature, using pulsed ON time.
- (3) Dropout is measured at constant junction temperature, using pulsed ON time, and the criterion is VOUT inside target value ± 2%.
- (4) Dropout test is skipped at the condition of  $V_{IN} < 3V$ .

# **Typical Operating Characteristics**

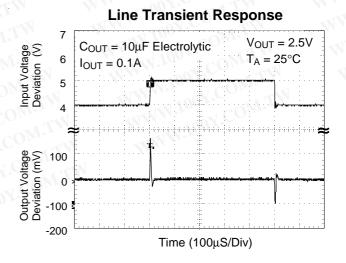

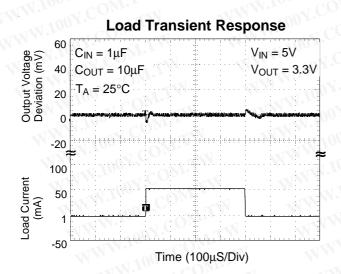

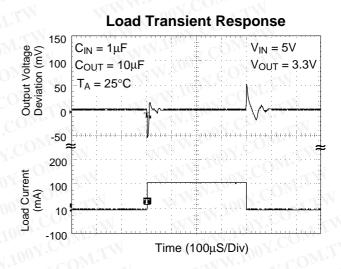

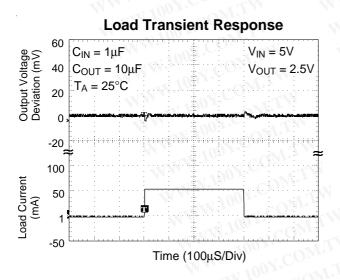

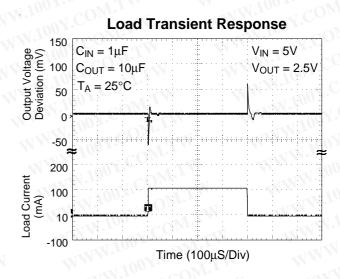

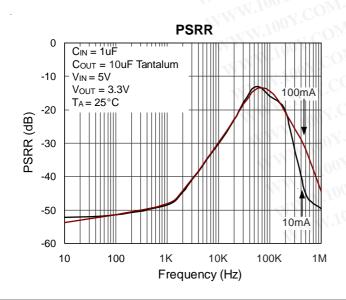

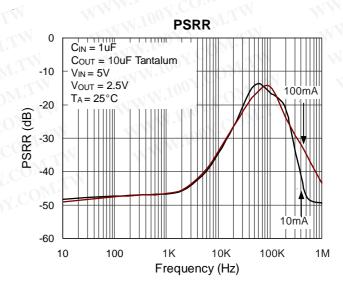

### **Application Information**

A 10uF capacitor with  $200m\Omega$  or higher ESR, connecting between VOUT and GND pins, is recommended for stability. A capacitor with ESR smaller than 200 m $\Omega$  may cause VOUT oscillation as shown in Figure 1. Operating temperature should be well considered to ensure that the capacitance is no less than 10uF over the operating temperature range. Please take the notice that Aluminum electrolytic capacitors may cause VOUT oscillation when operating below -25° C. The capacitance can be increased without limit for better transient response.

A 1uF or higher capacitor should be placed between VIN and GND to filter out input noise and ensure stable output voltage.
